DETAILED ACTION

Claim Rejections - 35 USC § 102

(a) the invention was known or used by others in this country, or patented or described in a printed publication in this or a foreign country, before the invention thereof by the applicant for a patent.

1. Claim 1 is rejected under 35 U.S.C. 102(a) as being anticipated by the applicant's admitted prior art (AAPA) of this application.

AAPA teaches an electronic component characterized by its structure wherein a heat conductive adhesive made by blending boron nitride powder that inherently has a diamagnetic anisotropic magnetic susceptibility and adhesive polymer is interposed between a heating device and a heat conductive member. See the Background of the Invention on pages 1-3 of this application.

Note the processing and/or intended use limitations of "adhering with boron nitride powder oriented in the heat conductive adhesive to a fixed direction under a magnetic field atmosphere by the use of the diamagnetic anisotropic magnetic susceptibility of the boron nitride powder" are given no weight in a structure or device claim.
